

AGILE TESTING WITH ADESSO

EARLY, TARGETED AND INTEGRATED TESTING

YOUR BENEFITS

You benefit from our broad portfolio of quality assurance services:

- > Testmanagement
- > Test preparation and implementation incl. Test data management
- > Test automation
- > Selection, introduction and/or configuration of QA tools
- > Analysis and evaluation of test processes according to established test standards

Is it also your goal to obtain a valuable product with the greatest possible benefit as early as possible and with the least possible effort? This is exactly where agile development methods come in.

To benefit from this, it is essential to build testing together with all other disciplines. It must be thought of early on how developers, embedded testers and the business can test and reflect continuously.

“Fail fast“ means using testing and verification to detect the weak points are recognised, identified and remedied at an early stage and on an ongoing basis. The aim is to solve important and urgent challenges in a sustainable way..

Frequent testing, experimentation, reviews, demos as well as the coordination and close collaboration between all parties involved promote rapid reflection and adaptation of both the product and the processes, methods and tools in order to achieve the greatest possible benefit.

Therefore, the following also applies to testing: early, simple, continuous and reflected.

From requirements through to development, testing and deployment, lean, flexible but valuable processes must enable close collaboration.
