

MAKING SAP DATA AI-READY WITH SNOWFLAKE

MODERN SAP-SNOWFLAKE INTEGRATION WITH ADESSO AS YOUR LAUNCH PARTNER

With adesso by your side, integrating SAP and Snowflake becomes a true competitive advantage. Through close collaboration with Snowflake and SAP, adesso combines the strengths of both platforms into a seamless data and AI ecosystem, allowing you to transform your SAP data into valuable real-time insights.

Long wait times for monthly corporate reports. Data scientists who can only access SAP master data through tedious workarounds. Business departments making critical decisions based on outdated Excel exports. If you still rely on traditional replication pipelines to bring SAP data into your analytics and AI environments, you pay twice: with your time and with trust in your results.

Integrating the SAP Business Data Cloud and the Snowflake AI Data Cloud fundamentally changes this situation. SAP data is available in Snowflake in real time, semantically enriched, and fully compliant with governance standards.

This turns the ERP silo into a productive foundation for analytics, machine learning, and Cortex AI. Business departments regain their self-service capabilities, IT is freed from high-maintenance data pipelines, and AI applications gain direct access to the data that actually holds your business intelligence.

As a launch partner, adesso is one of the few IT consultancies in the DACH region already guiding clients through this integration in initial projects. This is backed by direct collaboration with the SAP and Snowflake product teams, as well as adesso's deep industry expertise in sectors like insurance, banking, the public sector, and healthcare. This expertise goes far beyond purely technical connectivity, ensuring the integration perfectly aligns with your business requirements.
