

Gather insights from combined internal and external data sources to make better decisions:

Data Analytics as-a-Service

Different data sources – wrong outcome

Life Sciences companies generate a huge amount of product, process and operational data on a daily basis, mostly spread over different data sources. External data delivered by suppliers, authorities and medical institutions are adding complexity to the data analysis process. Mistakes are bound to happen in this manual or partially automated process and quickly lead to confusion instead of clarity. Therefore, a clear understanding of the data flow, supported by an appropriate data analytic tool is crucial to stay on top of your data.

Structured analysis and visualization

Data analytics tools enable a structured approach to aggregate, process and visualize data in order to turn it into insights. This is achieved by centralizing the data and thus forming one source of truth which makes the collaboration and exchange of the analysis results smoother. The full integration approach reduces costs and improves data quality due to automated data gathering, analysis and results sharing. The various visualization possibilities and interactive charts reduce the complexity and enhance the user experience.

Adopting a new data analysis approach

adesso offers individual building block services from which companies can choose their own way to adopt a business intelligence solution. Our experts support you during the complete project cycle or in specific project stages, depending on your needs:

- > Requirements Engineering
- > Data Architecture
- > Inventive Thinking
- > Implementing the solution & the testing strategy
- > End user training
- > Agile project management

Your benefits at a glance:

- ✓ Aggregation of different data sources
 - ✓ Real-time data analysis
 - ✓ Interactive visualization
- ✓ Easy result export and collaboration
- ✓ Agile pay-as-you-use building blocks

You get your first prototype in a couple of days with various low-code technologies

Do you have any questions? We are happy to help!
