

MIGSuite - the solution for data migrations

Are you facing the challenge of a technically complex data migration?

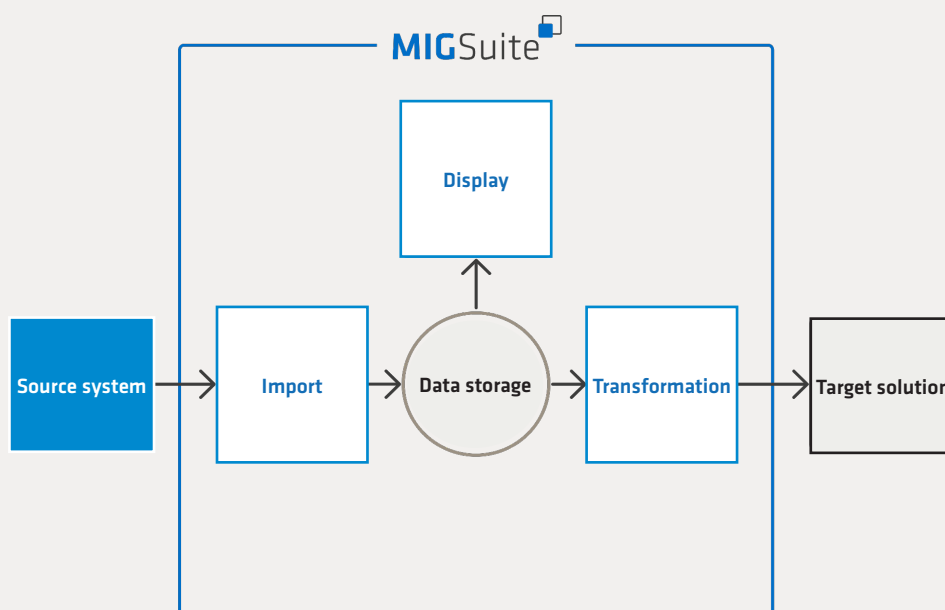

We will support you regarding your migration project.

The efficient and revision-safe solution for your migration projects

Many companies still work with outdated (mainframe) systems that are an obstacle to accelerate digital transformation and do not meet the latest professional and technical requirements.

A smooth data migration from your old legacy system to your new target operating system environment should only take place with a tried-and-tested migration process that has been certified by auditors.

With the MIGSuite solution adesso offers an efficient and error-minimized handling of technically complex migration projects. Your employees can continue working as usual while we prepare your data for the new system landscape and migrate it to your target solution.

Technically complex data migrations based on the latest technology

MIGSuite is based on Java technology, is therefore independent of operating systems and can be integrated either into your current IT system landscape or can be run in the cloud. You only switch to the new system after a successful migration of your data. With the offered approach the data loss is prevented.

Our MIGSuite migration solution is being enhanced on a continuous base, ensuring that it's at the cutting edge of the latest technology.

Your advantages

Migrating the data to your new system will be easy and run smoothly thanks to the advantages offered by our solution:

Flexibility allows for the implementation of a complete migration at a single point in time (big bang) as well as a step-by-step migration strategy.

Cost reduction is achieved through the efficient and holistic migration of data to the new environment, allowing outdated technologies to be replaced faster.

Operational performance ensures simple expansion according to your specific needs.

Archiving - permanent display of historical data with MIGPool.

Saving of resources thanks to clear and comprehensible planning of your migration project.

Revision safety plays an important role in MIGSuite - the migration process has been certified by auditors according to the IDW PS 880 standard.

Industry independence - optimised for technically complex data migrations - no matter in which industry and with which technologies, for example, mainframe/host replacement or migrations to the cloud.

Let's analyse your migration project together and compare it with the best practice approach to migration. Our long-standing experience allows us to develop the right migration strategy for your project together with you.
