

IMPLEMENTATION S/4HANA WITH THE ADESSO APPROACH

SUCCESSFUL, LEAN, MINIMALLY INVASIVE

Many midmarket SAP customers have not yet started the preparations or conversion to S/4HANA. We always hear the same arguments – maybe you’ve heard them too?

IS IT RIGHT FOR YOU?

We target our service to small and mid-sized companies that:

- are satisfied with their current process landscape,
- do not want to question everything in an S/4 project,
- yet want to switch to S/4HANA quickly to minimize uncertainties and costs.

1. Other priorities

There are often other business or IT projects in the foreground.

2. Satisfaction with current system

The current ECC system covers the current business requirements.

3. Respect for high complexity

The perception persists that the changeover is expensive, complex and of little benefit.

You’re surely also aware that the clock is ticking - SAP will only support the older version until 2027. So the question is not if but when you’ll need to switch. We recommend you don’t let precious time pass. Your ERP system is in many ways the backbone of your application landscape, and you can avoid risks by getting an early picture of how to make the migration efficient and minimally invasive.

This is exactly where we come in. Instead of embarking on a broad and expensive transformation, we aim to leverage your current success with ECC and transfer it to the new S/4HANA environment.

IN SHORT

Your switch to SAP S/4HANA doesn’t have to be complicated or expensive. After a short chat with our experts, we’ll be able to confirm whether the adesso approach is right for you and what the next concrete steps might look like.

We offer an efficient and cost-effective way to change over. If optimizations are necessary, these can be carried out after the changeover, depending on your capacities in business and IT - and of course your budget.
