

Security Governance Milestone for the Canton of Aargau

○ Digitalisation of the ISDS core process for the Canton Aargau

- > The successful collaboration between adesso and the Canton of Aargau again enabled the digitization of Information Security and Data Privacy (ISDP) through a centralized, automated solution capable of managing future related processes. Leveraging the **Low-Code platform**, this application provides standardized risk assessments, automates decision-making processes and ensures full compliance with all regulatory requirements.

BENEFITS FOR THE CLIENT

The results are **enhanced transparency, standardization** and, above all, **responsiveness** in the face of evolving security and data protection requirements. Some examples:

- > A significant reduction in manual workload
- > Real-time process monitoring available to all stakeholders
- > Improved accuracy and consistency in risk assessments

”

What impressed us most throughout the project was the collaboration: adesso constructively challenged our requirements, provided clear recommendations, and quickly translated them into functioning software.

David Schlaginhaufen, CISO Kanton Aargau
